ABOUT ME

Data Scientist with a Bachelor's degree in Computer Science and hands-on experience in data pipeline development, statistical analysis, and machine learning experimentation. Built a production-grade data processing system handling real-time sensor data, applying validation and analysis techniques using Python and its scientific stack. Eager to apply strong analytical foundations and engineering skills to data-driven problems.

EXPERIENCE

Fullstack Developer

Córdoba, Argentina

Laboratorio de Radar y Sensores Remotos (FAMAF, UNC)

January 2025 - March 2026

- Designed and implemented a real-time data ingestion pipeline in Python (FastAPI + PostgreSQL), handling one-second interval sensor streams with per-record validation and error detection
- Architected a self-hosted production deployment using Docker and Traefik, ensuring system reliability and service availability
- Developed an interactive web interface for live sensor data visualization, bridging backend exposure with end-user monitoring
- Contributed to embedded sensor firmware in C++, performing bug fixes to ensure stable data output

Freelance Developer

Remote

Self-Employed

January 2024 - November 2024

- Built custom web scrapers and automated data extraction pipelines for clients, handling inconsistent formats and edge cases across diverse websites and document sources (BeautifulSoup, Selenium)
- Developed PDF parsing tools to extract structured data from unstructured documents, converting raw output into clean, usable formats

EDUCATION

Universidad Nacional de Córdoba - FAMAF, Argentina

March 2021 - March 2026

Computer Science

PROJECTS

Conversation Summarizer | Python, Transformers

- Developed a pipeline to automatically summarize chat conversations using pre-trained LLMs via the Transformers library
- Evaluated and compared multiple models to identify the best performing approach for conversational summarization

Fashion MNIST Classifier | Python, PyTorch, Scikit-Learn, Neural Networks

- Built and trained neural network models to classify clothing items from the Fashion-MNIST dataset
- Developed an autoencoder-based feature extraction pipeline that improved downstream classification accuracy

SKILLS

Languages: Python, SQL, JavaScript

AI / ML: PyTorch, Scikit-learn, Transformers, Numpy, Pandas

Tools: Linux, Git, GitHub Actions, Docker, PostgreSQL, MongoDB, AWS, Jira

LANGUAGES

- **Spanish:** Native Speaker
- **English:** Full professional proficiency (FCE - C1)
